

Instructions for Kreaxions Star Template

Trace the star template and cut out. Select the Kreaxions 4 in 1 punch that you'll be using and put the "A" inserts into the punch. Place point of cut out star into punch with both sides of point against the edge of the insert and punch. Repeat with all points of star. Depending upon the punch used and how closely the star was cut out determines if the 'border' edge of the punched design stays attached. You can leave these borders or cut them off.

Cutting out the center: There is a pin hole in the center of the star template. After you cut out your star, but before you punch your design lay the star template on top of your cut out star and mark the hole with a pencil or if you're using the Kreaxions Circle Cutter use the pointed end of the cutter. Remove template and punch your design. The use your circle cutter to cut out the center of the star using the marked center point as your guide.
